

Mediamplify Cloud Upgraded

The Mediamplify Cloud has been upgraded and now has a lot of more capacity than before with:

- Close to 100TB of storage,
- Up to 10Gbs of Bandwidth to the internet,
- Thousands of instances running,
- GlusterFS with major deployment

We used Xen, Software Defined Networks, Fiber Links and the cloud can be connected via Fiber to any location around the world with our alliance with Level3 Communications
